PULVERIZER & FRUIT MILL/PASTEURIZER

High capacity, Single pass production Of slurries, pastes or liquids. pulverize are designed to provide high-speed fine crushing at peripheral speeds of more than 100m/sec.TP make products with uniform grain size at an extremely large attached to a rotating disk, which rapidly rotate at a rotating disk, which rapidly rotate at a distance of one millimeter inside a fixed lining plate to cause impact, grinding, collapse, and molecular collision.

The multi-pipe pasteurizer adopts flat, horizontal pipes and its heat transferring coefficient is close to the plate type ones. However, it features with higher pressure proof and easies access for cleaning. Suitable for crushing hard seedless fruits before pulping juice extraction
